

Woodline Basic Combination Plaque

product specifications

Details

- Woodline basic: 9mm thick oak base panel with 8-10mm clearGreencast® acrylic front supported on 4 silver pillars and end caps
- Woodline: 9mm thick oak base panel with metal plate and 8-10mm clearGreencast® acrylic front supported on 4 silver pillars and end caps
- Superb 4 colour process print to metal plate and/or acrylic front
- Wide choice of metal finishes available (see above)
- Bespoke shapes & sizes possible at an additional cost
- Rear wall slots for hanging as standard
- Recommended for internal use only
- No minimum order quantity
- Call off and monthly administration systems are available

Size/s

Rectangular plaques:

6" x 8"

8" x 10"

Round plaques:

8"

Material/s

Base: Wood is inherently renewable and sustainable when properly sourced and managed and we only use wood from suppliers with proven supply chain certification to international standards. As a natural organic material, wood has a lighter carbon footprint than almost all synthetic materials. All wood types simply biodegrade at end of life. Production waste is used in agriculture and for home heating due to its incredibly low moisture content.

Metal Plate: Aluminium is one of the most sustainable materials around. Recycling aluminium is widely done and saves about 90% of the energy it takes to make new aluminium, also reducing the mining of the bauxite ore needed. Due to its wide and varied applications, the commercial and domestic recycling infrastructure of aluminium is continually growing and all our aluminium production waste is sold for recycling, the proceeds of which are used to plant trees with Ecologi. Recycling of aluminium varies widely in the UK with plenty of local council metal recycling centres.

Front: Greencast® acrylic is produced from 100% recycled acrylic and is 100% recyclable at the end of its useful life if disposed of correctly, creating a full circular economy for the prevention of acrylic plastic waste ending up in landfill. Greencast® acrylic uses a proprietary process for the recovery of the original solvent (PMMA) for the production of new acrylic which can, in turn, be recycled countless times without ever losing its virgin quality. All our Greencast® acrylic factory waste is recycled for zero landfill production.
